1. General Technical Specification and other project implementation requirements for Collating and Bonding Device for the production of ID1 cards

1.1 Technical parameters

The Client requires purchase of a semi-automatic equipment used for collating and spot welding of plastic sandwiches. The equipment must be suitable for collating and welding sheets of plastic foil into the so-called sandwich, which will be then prepared for lamination process.

Manual loading of individual sheets for collating is required.

Positions of individual sheets collated in the sandwich must be able to be monitored by cameras. The device must be able to shine through the white sheet so that the top camera can detect the printing mark printed at the bottom of the sheet.

The equipment has to include punching system for fixing sandwiches in lamination process (pin holes for fixing on relief lamination plates), see the drawing in the attachment. The punching system will be used just for formats ID1 (295 x 330 mm).

The equipment must be also fitted with a device for thickness measurement (for individual layers and addend layers measurement).

Equipment specification	Operational requirements
Registration, Inspection of obverse and reverse face fitting	At least 3 static top cameras and 1 monitor, focused on design elements and printing marks (cameras with the possibility of shifting, e.g. for future expansion to 3x8 format) During ordinary production the cameras must be static (without moving even when changing from a 3x5 to 3x7 job and back), therefore we require at least 3 cameras. Printing marks: various colors, including silver on transparent chip pre-laminates Registration: edge registration, camera registration by registration marks (e.g. printed layers, layers with DOVIDs) Camera registration available for all collated layers
Measuring of the thickness of each layer	YES, automatically during welding
Welding	Ultrasonic welding preferred Moveable jaws allowing shift after each completed welded joint
Welding process activation option	Leg switch

Punching with suction	YES for relief lamination plates
Reinforced work desk	The work desk cannot bend on touch or during product handling as it could negatively affect the thickness measurement
Shelves to store individual layers (at least 5)	To remove foils
Sheet format	295 x 330 mm or 295 x 435 mm
Number of cards on a sheet	3 x 5 or 3 x 7
Material	PC, PVC, PET G, ABS White or transparent
Temperature of welding	Adjustable
Number of layers, sandwich thickness	Up to 10 (1 000 µm) Up to 1 000 µm
Material thickness	50 – 500 µm
Annual production – 3 shift operation	Min 384 sandwiches per shift At least 3 000 000 cards / year
Control SW and labels around the machine	In Czech language or using international pictograms
Saving of programs	YES, at least 50 programs

1.2 Other project implementation requirements

The project implementation process must also include transportation and delivery of the equipment to the place of fulfilment, installation and start-up of the equipment including setting up programs for processing all our ID-1 jobs (max. 10 programs), training of employees selected by the project announcer and delivery of all documents necessary for the acceptance and use of the equipment, in particular, the user's manual, maintenance and adjustment guidelines (in Czech language), drawing documentation, electrical diagrams, spare part catalogue and declaration of conformity.

List of documents and technical documentation

- risk analysis (description of the accepted methods of removing or reducing the hazards posed by the mechanical equipment)
- a list of all consumables for the operation of the Device, including Material safety data sheets, recommended suppliers of the consumables and their prices.

II.

1. The Contractor agrees to provide inspection bodies of both Contracting Parties with the required technical documentation pertaining to the Device and describing the method used to assess conformity, including all source documents in the scope defined by the applicable technical rules of both Contracting Parties.
2. The Contractor acknowledges that the Device manufacturer is obligated to keep technical documentation on its premises for 10 years after the manufacturing or sale of the Device production was discontinued; this period of time may be specified differently.

Testing of the Device

Description of FAT tests

Range of tests: 1 day

Quality of the welding - the welded joint must withstand the suspension of the sandwich in the air by any of its layers for at least 10 seconds.

Setting of collating programs (1 program for 3x5 – PC sandwich and 1 program for 3x7 – PVC sandwich).

Repeatable collating accuracy for both formats - 30 sandwiches will be collated to verify that the device still behaves the same way and has the same result.

Verification of collating speed (approx. 12 sheets in 15 minutes), dimensions and positions of punching for pins (according to a sample sheet from the current collating machine).

Verification of the possibility of setting up to 10 layers with registration crosses for 1 sandwich.

Verification of the functionality of the station for measuring the thickness of materials during collating.

The ability to weld weak foils and thick pre-laminates.

Ability to register different colors of crosses.

Ability to shine through a white sheet and register a cross printed on the underside of the sheet.

Verification of the implementation of all parameters listed in the technical specification.
